* A02.3.04.001 *Cavea thoracis* The term *compages thoracis* was introduced in the fourth edition of *Nomina Anatomica* as "a new term to denote the thoracic skeleton" (footnote 34, page A 28). However, it has not received wide acceptance and the appropriate term is *cavea* – a cage, rather than the previous *cavum* – a cavity.

* A02.3.04.003 | A02.3.04.004 *Apertura thoracis superior/inferior* The terms "thoracic inlet" and "thoracic outlet" have been used differently by clinicians. Thus, the thoracic outlet syndrome refers to the thoracic inlet of this terminology.
