Universal Terminology

Contents

16.1 What is navigation

A terminology about human anatomy is a large corpus of information to be counted by hundreds of items. In such a domain, there is no starting point, no center, no flags to indicate where you are. Navigation is the art of moving in the terminology, in the sense to reach a predefined target. There are certainly several paths leading to such a goal: it does not matter which one is followed, the important is that one of them can be easily found. Different casual users will take different paths and the important is that they find their way, they reach their goal and that they are satisfied by the manner this process has been performed in an acceptable amount of time.

16.2   Log of updates

16.3   Credentials

This document is part of the book "Universal Terminology" accompanying the website on Terminologia Anatomica. It expresses the vision of the authors of the $\mathbf{T}_{logy}$about the foundations of the science of ontology, supporting the here presented terminology. Despite it is as exact as possible, close to the reality of the database of the terminology and the surrounding software, approximations, errors and ambiguities are possible and should be considered as independent of their willingness and intents.

Identified comments about the content of the website and its presentation are welcome. An appropriate answer will be given when pertinent.
