

CHAPTER 50: BIBLIOGRAPHY

This chapter presents the bibliography concerning the domain of the \mathbf{T}_{logy} . All relevant scientific papers about the domain of \mathbf{T}_{logy} have been collected and are presented here. When PDF copies are available, they can directly be reached on user demand.

The authors of this book do not necessary share the opinions of the different persons appearing in the bibliography and cannot be considered responsible of the content of the different papers. The selected papers have been uniquely selected because they are in some way in relation to the content of this book, either supporting the proposed ideas or in opposition.

This document is the chapter 50 of the book Universal Terminology which presents a global documentation on the \mathbf{T}_{logy} .

20.3 Content	3
20.4 Log of updates	9
20.5 Credentials	9

20.1 Introduction

A reference book on ontology and terminology is necessarily based on state of the art scientific literature. This chapter is the seat of a general bibliography distributed along two axis: the ontology and the anatomy. This bibliography is more extended than the list of references found in the book. Indeed, many papers and other sources are mentioned simply if they are relevant to the two mentioned domains.

20.2 Method

Any eligible reference is collected under the form of 5 items, described thereafter:

- Author
This item is the list of all authors of this reference. Christian names are coming first in any number, followed by the first name. The different authors are separated by the word "and" (no commas).
- Title
The full title of the reference, as a free text.
- Source
The journal reference or any relevant text indicating where the reference is coming from.
- Year
The year of publication (four digits).
- Link
A optional link to a PDF file (or any other format) where this reference can be found.

The 5 items are collected in a text file according to the bibitem format. A sample of this file is shown on figure 20.1. Typically, the second entry is a reference to [Rosse and Mejino \(2003\)](#).

20.3 Content

The content of the bibliography is organized into two sub-domains: the ontology sub-domain and the anatomy sub-domain. Each sub-domain is collected in a specific file acting as database repository.

The two sub-domains are visible below under the heading Bibliography. The first occurrence concerns the domain of ontology and the second occurrence concerns the domain of anatomy.

20.5 Credentials

This document is part of the book "Universal Terminology" accompanying the website on Terminologia Anatomica. It expresses the vision of the authors of the \mathbf{T}_{logy} about the foundations of the science of ontology, supporting the here presented terminology. Despite it is as exact as possible, close to the reality of the database of the terminology and the surrounding software, approximations, errors and ambiguities are possible and should be considered as independent of their willingness and intents.

Identified comments about the content of the website and its presentation are welcome. An appropriate answer will be given when pertinent.
